Galloping Grass Mixture

32%	Orchardgrass
27%	Bluegrass
16%	Festulolium
14%	Timothy
6%	Medium Red Clover
5%	Teton Alfalfa

(Approximate percentages based on Pure Live Seeds per Sq. Ft.)

Characteristics:

- Adapted to upland ground, dryland, and well-drained bottom land.
- Pasture and Hay use with a focus on species best suited for horses.
- Fair upland-game nesting and brood-rearing cover.
- Legume portion adds protein and will help carry production in warmer summer months.

Seeding Rates & Establishment:

- Seeding rate: 18 lb./acre, increase planting-rate 20% per acre if broadcast.
- Seed in a weed free seed bed April 1 to May 1, August 10 to September 10 at 1/4th to 1/2 inches deep.
- As with all newly seeded areas, good seed and soil contact, as well as adequate moisture, is required for successful germination and establishment.

Cultural Practices After Establishment

- Shredding the first year is a good idea if weed competition is severe. If possible shred trouble areas only.
- Avoid grazing the first year after seeding until new stand is well established.
- Do not graze shorter than 5 inches for best regrowth.
- Strip graze or hay to maintain some brood-rearing quality in part of stand at all times.
- Fertilize based on soil test results and production goals.
