

Technical Data Sheet

ARROW SEED CO., INC.

PO BOX 722
BROKEN BOW, NE 68822

Phone: 800-622-4727

Fax: 308-872-6945

ALL PURPOSE TURF MIXTURE

30% Armada Kentucky bluegrass
30% Rhapsody Kentucky bluegrass
30% Cardinal Creeping Red Fescue
10% Karma Perennial ryegrass

Seed Quality Specifications:

Minimum Purity: 98.0%
Minimum Germination: 80%
Maximum Crop Seed: 0.01%
Maximum Weed Seed: 0.02%
Certified Quality Available

Characteristics & Use

- Good bluegrass varieties provide good long term persistence at economical price.
- Can be used on home lawns, or in light to medium traffic areas in parks and school grounds.
- Good lawn overseeder mixture.
- Good density and color.
- Excellent disease resistance.
- Adapted to sunny or shady, irrigated or un-irrigated turf areas.
- Same strong bluegrasses as in the Countryside IV Blend

Establishment

- Germination in 7-21 days; depending on temperature and moisture.
- Seeding rate: 3 to 5 lbs./1,000 sq. ft. or 130 to 220 lbs./acre
- For best germination results, seeding should be done when soil temperatures are at least 50 degrees Fahrenheit. As with all newly seeded areas, good seed and soil contact, as well as adequate moisture, is required for successful germination and establishment.

Cultural Practices After Establishment

- Mowing: adapted to range from 1 1/2 inch to 3 inches.
- Fertilization: 2 – 4 lb. Nitrogen per 1,000-sq. ft. per year. Optimum dependent on soil type, mowing height, irrigation regime, and turf quality expectation.
- Irrigation: Applied as needed. Deep, infrequent applications are encouraged to maintain a healthy root system. Mowing height influences root depth, and more frequent irrigation will be required at lower height of cut.
- Pest Control: Insecticide may be necessary for white grubs, Bluegrass billbug, and sod webworm control.
- Annual core cultivation recommended for compaction and thatch reduction.
