Countryside IVR Kentucky Bluegrass Blend

- 27% Diva Kentucky bluegrass
- 22.5% Rhapsody Kentucky bluegrass
- 22.5% Armada Kentucky bluegrass
- 18% Skye Kentucky bluegrass
- 10% Exacta 2 GLSR Perennial ryegrass

<u>Seed Quality Specifications</u>	
Minimum Purity.....	98%
Minimum Germination.....	85%
Maximum Crop Seed.....	0.00%
Maximum Weed Seed.....	0.01%
Certified Quality	

Characteristics:

- Good density and fine texture for a high quality turf.
- Very good resistance to summer patch, necrotic ring spot, leaf spot, and dollar spot resistance.
- Suited for high quality home lawns, parks, golf course roughs, and commercial turf areas.
- Solid and consistent turf performance at a great price.
- Medium dark green color
- Adapts to high or low maintenance and recovers quickly from drought and abuse.
- Grows well in full sun or partial shade.
- Requires irrigation for optimum performance.

Establishment:

- Germination in 7-21 days; depending on temperature and moisture
- Seeding rate: 2-3 lbs./1,000 sq. ft. or 88 to 130 lbs. /acre
- For best germination results, seeding should be done when soil temperatures are at least 50 degrees Fahrenheit. As with all newly seeded areas, good seed and soil contact, as well as adequate moisture, is required for successful germination and establishment.

Cultural Practices After Establishment

- Mowing: adapted to range from 2 inch to 3 inches; optimum height 2 to 2 1/2 inches
- Fertilization: 2 – 4 lb. Nitrogen per 1,000-sq. ft. per year. Optimum dependent on soil type, mowing height, irrigation regime, and turf quality expectation.
- Irrigation: Applied as needed. Deep, infrequent applications are encouraged to maintain a healthy root system.
- Pest Control: Insecticide may be necessary for white grubs, Bluegrass billbugs, and sod webworms
