## ***DURATURF Tall Fescue Blend***

20%	Amity LS Tall Fescue
20%	Valkyrie Tall Fescue
20%	Firecracker SLS Tall Fescue
20%	Titanium Tall Fescue
20%	Fayette Tall Fescue

<u>Seed Quality Specifications</u>	
Minimum Purity.....	99.45%
Minimum Germination.....	90%
Maximum Crop Seed.....	0.03%
Maximum Weed Seed.....	0.00%
Certified Quality Available	

### **Characteristics & Use:**

- Well suited for lawns, parks, industrial, and sport turf. All varieties rated at the top of the NTEP for quality
- Superior color, texture, density, drought and disease resistance.
- Resistant to surface feeding insects like billbug, armyworm, and sod webworm.
- Tolerates full sun and moderate shade.
- Excellent traffic and wear tolerance once mature.
- Bluegrass adds to sod strength, wear tolerance, and divot resistance for park and athletic field use
- Features *Firecracker SLS* turf-type Tall fescue, with *Lateral Spread* technology.

### **Establishment:**

- Tall Fescue germinates in 7-14 days
- Kentucky bluegrass germinates in 10-21 days
- Perennial ryegrass germinates in 4-10 days
- Seeding rate: 8-10 lbs./1,000 sq. ft. or 350 to 435 lbs. /acre
- For best germination results, seeding should be done when soil temperatures are at least 45 degrees Fahrenheit. As with all newly seeded areas, good seed and soil contact, as well as adequate moisture, is required for successful germination and establishment.

### **Cultural Practices After Establishment:**

- Mowing: range from 1 ½ inch to 4 inches; optimum 3 - 4 inches for top low-maintenance performance
- Fertilization: 1 – 2 lb. Nitrogen per 1,000-sq. ft. in fall for best rooting and healthy turf. Higher fertility levels will increase turf quality, however irrigation and mowing requirements will increase as well.
- Irrigation: Applied as needed. Deep, infrequent watering is encouraged to maintain a healthy root system.
